

WHAT IS CLAIMED IS

5

1. A telephone set identifying method for identifying a type of portable telephone set to which a data processing apparatus is coupled, comprising the steps of:

10 identifying the type of the portable telephone
set based on a response with respect to an operation
start signal which is output to a data interface
part of the portable telephone set.

15

2. A telephone set identifying method for identifying a type of portable telephone set to which a data processing apparatus is coupled, comprising the steps of:

identifying the type of the portable telephone set based on a waveform of a signal output from a specific terminal of a data interface part of the portable telephone set.

30 3. A telephone set identifying method for
identifying a type of portable telephone set to
which a data processing apparatus is coupled,
comprising the steps of:

identifying the type of the portable telephone
35 set based on an allocation pattern of input and
output terminals of a data interface part of the
portable telephone set.

5 means for identifying the type of the portable telephone set based on a response with respect to an operation start signal which is output to a data interface part of the portable telephone set.

5. A telephone set type identifying apparatus for identifying a type of portable telephone set to which a data processing apparatus is coupled, comprising:

means for identifying the type of the portable telephone set based on a waveform of a signal output from a specific terminal of a data interface part of the portable telephone set.

25 6. A telephone set type identifying
apparatus for identifying a type of portable
telephone set to which a data processing apparatus
is coupled, comprising:

means for identifying the type of the portable
30 telephone set based on an allocation pattern of
input and output terminals of a data interface part
of the portable telephone set.

7. A PC card comprising:

a telephone set type identifying apparatus
identifying a type of portable telephone set to
which a data processing apparatus is coupled,

5 said telephone set type identifying apparatus
comprising:
 means for identifying the type of the
portable telephone set based on a response with
respect to an operation start signal which is output
to a data interface part of the portable telephone
10 set.

15 8. A PC card comprising:
 a telephone set type identifying apparatus
identifying a type of portable telephone set to
which a data processing apparatus is coupled,
 said telephone set type identifying apparatus
20 comprising:
 means for identifying the type of the
portable telephone set based on a waveform of a
signal output from a specific terminal of a data
interface part of the portable telephone set.

25

 9. A PC card comprising:
30 a telephone set type identifying apparatus
identifying a type of portable telephone set to
which a data processing apparatus is coupled,
 said telephone set type identifying apparatus
comprising:
35 means for identifying the type of the portable
telephone set based on an allocation pattern of
input and output terminals of a data interface part

of the portable telephone set.

5

10. A computer-readable storage medium which stores a program for causing a computer which couples to a portable telephone set to identify a type of the portable telephone set, comprising:

10 means for causing the computer to identify the type of the portable telephone set based on a response with respect to an operation start signal which is output to a data interface part of the portable telephone set.

15

11. A computer-readable storage medium which stores a program for causing a computer which couples to a portable telephone set to identify a type of the portable telephone set, comprising:

20 means for causing the computer to identify the type of the portable telephone set based on a pattern of an asynchronous signal output from a data interface part of the portable telephone set.

30

12. A computer-readable storage medium which stores a program for causing a computer which couples to a portable telephone set to identify a type of the portable telephone set, comprising:

35 means for causing the computer to identify the type of the portable telephone set based on an allocation pattern of input and output terminals of

a data interface part of the portable telephone set.

5

13. A processing apparatus operatively coupled between a communication equipment and an information processing apparatus, comprising:

10 an identifying part identifying a type of the communication equipment and outputting an identification signal; and

15 a switching part switching a communication protocol prestored for each type of the communication equipment, based on the identification signal.

20

14. The processing apparatus as claimed in claim 13, wherein the communication equipment is a mobile communication equipment.

25

15. The processing apparatus as claimed in claim 14, wherein the mobile communication is a mobile telephone set capable of making a
30 communication while moving or a personal handy-phone system telephone set unsuited for making a communication while moving.

35
